- 4 - black and white photographs mounted on an 18" x 20 1/2" matboard with the following description attached:
"These four photographs help illustrate the similarity of efforts undertaken to preserve for permanent record the famous "Marmes Man" discovery and an Apollo 14 lunar core sample: in the first picture (Upper Left) a scientist makes preparation to excavate the "Marmes Man" skull from a rockshelter in southeastern Washington; the second photograph shows the skull after removal being treated with a preservative by Dr. Roald Fryxell, Associate Professor of Anthropology At Washington State University, to preserve the historical find as a permanent archeological record. The "Marmes Man" skull is over 10,000 years old, and is the oldest well-documented human remains ever recovered in the Western Hemisphere. It was discovered by Dr. Fryxell in 1968. In the next picture (Lower Left) Astronaut Alan B. Shepard Jr. is seen assembling a double core tube in preparation for taking a core sample at the moon's Fra Mauro site. Finally, the core sample was taken to the Lunar
